

Assignment 1 - Airline Satisfaction Analysis

Problem Statement

The airline industry is highly competitive, and customer satisfaction is essential for success. This project will use exploratory data analysis (EDA) to investigate customer satisfaction scores from 120,000+ airline passengers. This project aims to identify factors that contribute to customer satisfaction and dissatisfaction and to make recommendations for improving customer satisfaction.

Data

The data for this project includes customer satisfaction scores and additional information about each passenger, their flight, and type of travel. The data consists of the following variables:

- Customer satisfaction score
- Passenger age
- Passenger gender
- Passenger travel class
- Flight distance
- Flight arrival and departure delays
- Evaluation of different factors like cleanliness, comfort, service, and overall experience

Instructions

Load the data to answer the following questions:

1. Data information – List out the how many numerical and categorical variables
2. Perform feature statistics and create a table for the numerical variables' mean mode, dispersion, min, and max. Write down observations for all the numerical variables.
3. Which percentage of airline passengers are satisfied? Does it vary by customer type? What about the kind of travel?
4. What is the customer profile for a repeating airline passenger?
5. Does flight distance affect customer preferences or flight patterns?
6. Which factors contribute to customer satisfaction the most? What about dissatisfaction?

Submission

Complete the presentation file with the following format and email to professoraruprdas@gmail.com:

1. Slide 1- Business Problem
2. Slide 2 – Data dictionary
3. Slides 3 -9 – Explanation of the 6 questions– Graphs and Chart with a clear explanation
4. Slide 10 - Orange workflow picture
5. Slide 11 – Final Observations
